Build for lasting Performance

The Natural Beauty of Wood. Crafted in Europe to Endure.

European Production = Lower CO₂ Footprint

Manufactured locally to reduce transport emissions and ensure full accountability.

100% Traceable European Raw Materials

Sourced from certified suppliers across Germany, Poland, Lithuania, Denmark and beyond.

75% European Hardwood Content (Beech/Oak)

High natural fiber content for strength, stability and authentic wood character.

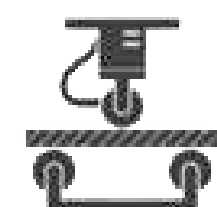

Lower Density Overseas Composite Materials

Engineered for easier handling, transport and efficiency structural advantage.

Less Heat Build-Up. Reduced Thermal Movement

Designed to stay cooler underfoot and more dimensionally stable in changing climates.

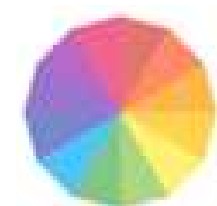

Up to 600 mm Residential Joist Span

Structural strength that reduces substructure requirements and installation time.

Up to 30 Years' Warranty

Long-term confidence backed by European manufacturing standards.

Custom Colours & Project-Specific Lengths

Flexible production tailored to architectural and commercial requirements.

Full Product Ownership – Cradle to Cradle

Responsible lifecycle management from raw material to end-of-life reuse.

15% German HDPE Polymers and 10% non Toxic Additives

Carefully balanced formulation for durability, performance and long-term reliability.

European Quality Built for Every Climate.

SMART CHOICE FOR DEVELOPERS AND HOUSING PROJECTS

Green Plank® EU-manufactured composite decking offers predictable lifecycle costs, efficient construction, and verified material traceability. Produced locally with consistent quality, it ensures a reliable supply for professional large-scale developments.

KEY FEATURES

01

Up to 600 mm Joist Spacing

Strong structural performance allowing wider joist spacing and fewer support elements.

02

Reduced Installation Cost

Optimized design that lowers labour time and hardware requirements.

03

Minimal Maintenance

No regular oiling, sanding, or repairs required over time.

04

Consistent Visual Appearance

Uniform colour and finish across projects for a premium look.

05

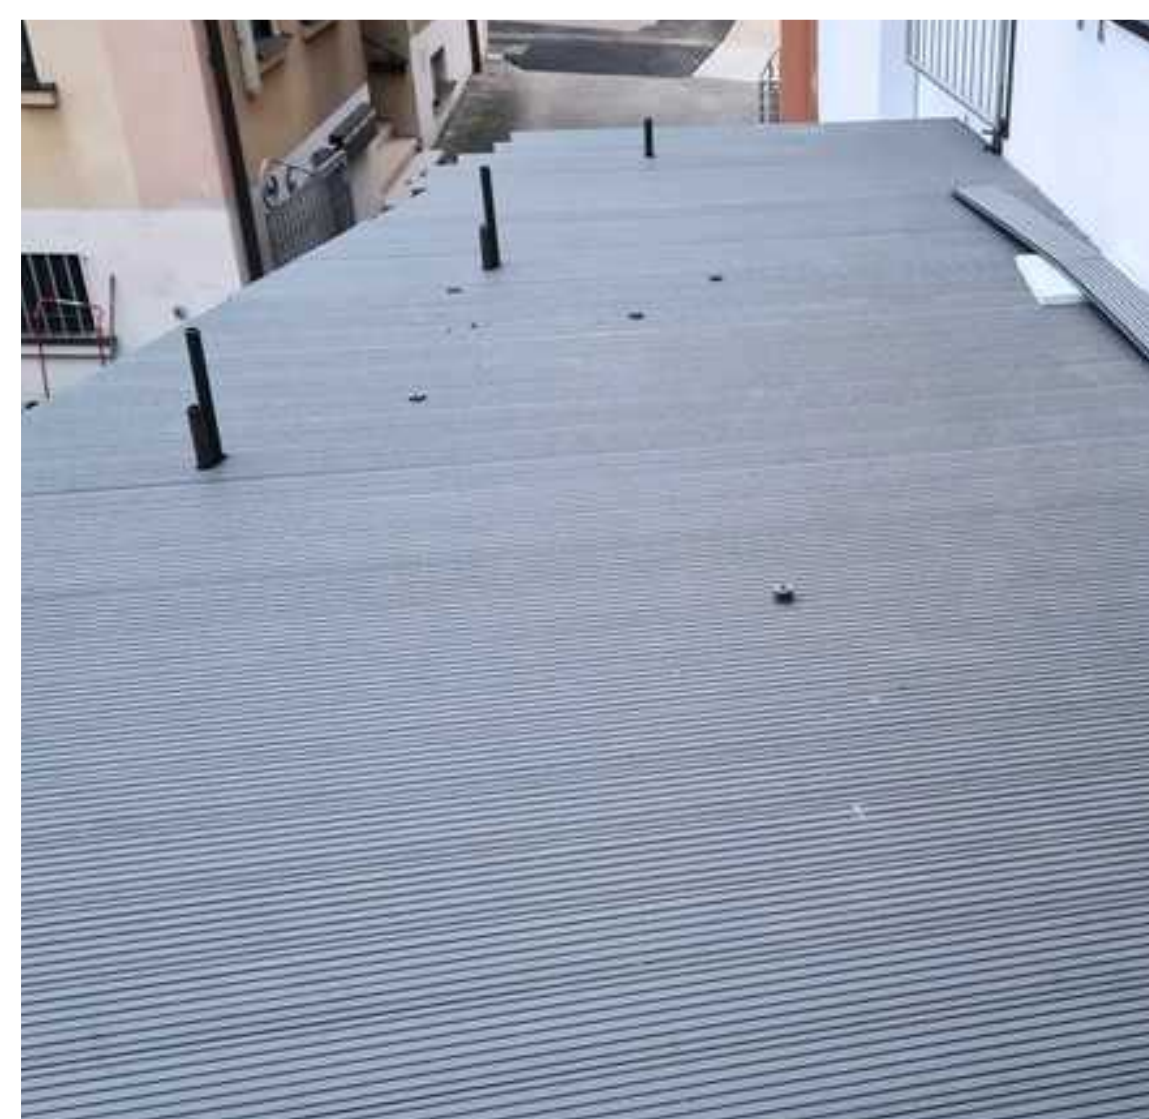

Long-Term Durability

Engineered for reliable outdoor performance with a 30+ year lifespan concept.

06

Lower Lifecycle Cost

Reduced maintenance and replacement needs over the product lifetime.

Durable & Cost-Efficient Outdoor Solution

Designed to deliver a durable, low-maintenance outdoor environment with high architectural quality, efficient installation, and optimized lifecycle costs while maintaining a clean and consistent appearance over time.

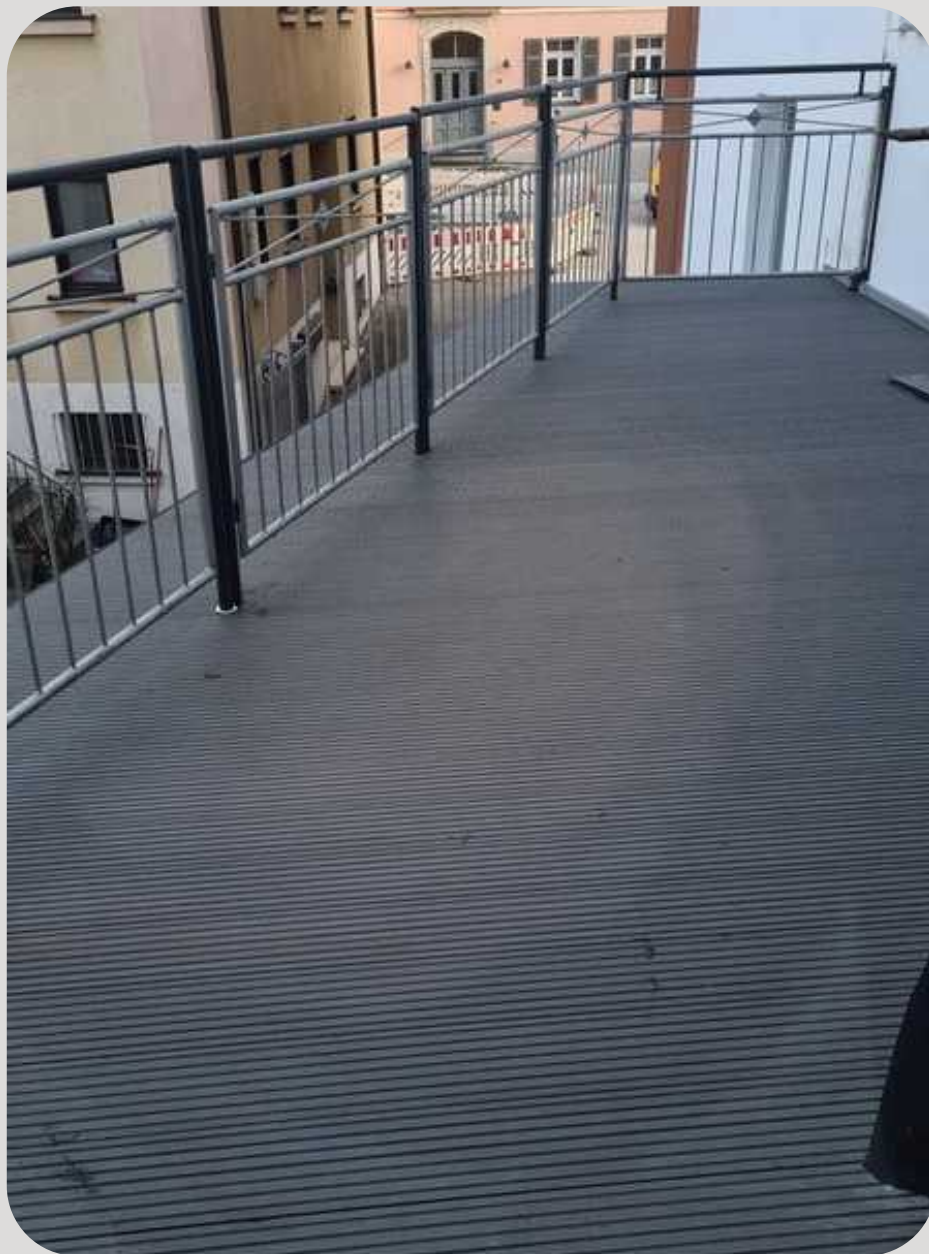

European Composite Solutions

Made with 100% European-Sourced Raw Materials

For Professional Distributors Requiring Full Traceability

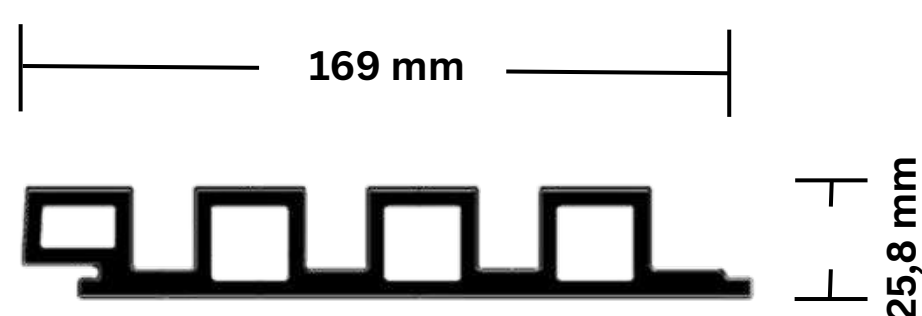

Green Plank® composites, made in the EU from fully traceable raw materials, offer a reliable, high-quality alternative to imports, supporting distributors across Scandinavia and Europe, and are engineered for durability and performance in both retail and large-scale construction projects.

Green Plank® — Premium Scandinavian Composite for Professional Building Supply

- **Made in EU** – strong demand for European materials
- **600 mm joist span** – lower installation cost for customers
- **Traceable raw materials** – supports public and sustainable projects
- **Stable quality** – fewer claims and returns
- **Custom colours & lengths available** – suitable for architectural projects
- **Shorter delivery routes** – faster and more reliable supply
